

Uncover Actionable Insight from Your Risk Decisioning Processes

Imagine the possibilities, if you could grasp every node of decisioning **data** - from application details and existing customer data, to third party information - and display that knowledge in configurable reporting dashboards. With Provenir for Business Intelligence and Analytics, you can take confident action based on real customer data.

The simplicity of Provenir's **Decisioning Engine** presents automated risk decisions in milliseconds. However, risk professionals understand that the data between the beginning and end of a decisioning workflow carries a wealth of operational and business insight.

With Provenir's Business Intelligence and Reporting capabilities, you can:

- **Maintain visibility** -- Keep an eye on KPIs with configurable Operations and Business Intelligence dashboards.
- **Command operational and business data** -- Expose data from your decisioning processes for use with industry-leading Business Intelligence (BI) tools like Tableau.
- **Visualize trace analytics** -- Look under the hood of your **decisioning** process to analyze time to decision, business logic performance, and other key metrics.
- **Uncover target customer segments** -- Identify approved borrowers for personalized retargeting campaigns.
- **Predict decisioning outcomes** -- Pair with **Provenir AI** to learn from your historical data and preemptively analyze decisions.

Provenir plays a very crucial role in our transformation -- going from a basic data supplier to a company that delivers big data analytics and decisioning.
